Summary

Engineer building and operating production data infrastructure at scale on one database. As CTO at Plenarius, operates a PostgreSQL platform over roughly 200,000 papers, where storage layout, indexing and query plans replace adding infrastructure. Reduced an author profile from 7.07 s to sub-second via a partial index with an INCLUDE covering column. Prior data and pipeline work at Viettel Post and FPT Software. Completing a Master of Artificial Intelligence at QUT, finishing November 2026.

Skills

- **Data platforms:** PostgreSQL, pgvector, halfvec and binary quantisation, HNSW indexing, query plan tuning, schema migrations, MongoDB, job queues.
- **Pipelines and modelling:** Python, Go, SQL, batch and streaming ingestion, large-scale text processing, data quality checks, embedding models, predictive modelling, anomaly detection, RAG.
- **Cloud & infrastructure:** Azure (Functions, Cosmos DB), AWS (EC2, S3), Hetzner, Cloudflare (WAF, R2 object storage), Caddy, systemd.

Experience

Chief Technology Officer

Apr 2026 – Present

Plenarius (formerly Calimac)

- Owned the core PostgreSQL database tier, actively tuning query execution behaviour and managing schema migrations directly without relying on framework defaults.
- Analysed query execution plans and redesigned access paths, uncovering and fixing a pagination correctness bug caused by duplicate ordering timestamps while systematically accelerating high-traffic database endpoints.
- Designed a multi-stage vector search architecture combining dimensional reduction, quantised storage, and an exact re-scoring stage to minimise index footprint while preserving retrieval quality across the corpus.

AI Researcher

Jan 2026 – Jun 2026

Cognilaw

- Evaluated and improved a hallucination-resistant RAG pipeline for legal workflows, testing retrieval strategies, grounded generation and answer validation using retrieval and response-quality metrics.

Research Assistant

Sep 2025 – Present

Queensland University of Technology

- Evaluated and engineered an agentic person re-identification system combining appearance, body composition, gait and physical attributes through confidence-weighted voting.
- Cleaned and prepared biomedical literature datasets, then fine-tuned transformer models for protein-protein interaction relation extraction.

AI Software Engineer

Apr 2023 – Nov 2024

Viettel Post

- Integrated Whisper fine-tuned on Vietnamese with BERT classifiers for offensive-language detection and mood prediction, achieving 90% accuracy in production.
- Trained an Extra Trees classifier for customer churn prediction, reaching 80% accuracy.

AI Software Engineer

Oct 2021 – Mar 2023

FPT Software

- Contributed to FPT's [US-patented](#) Sound AI acoustic anomaly-detection platform, deployed on a Samsung factory floor. Built its Python backend on Azure Functions, supporting model serving,

CI/CD and production monitoring.

Research Intern, Computer Vision

Apr 2021 – Jul 2021

Asilla

- Fine-tuned and deployed real-time [human pose estimation](#) on Jetson Nano with TensorRT, using INT8 quantisation and structured pruning to improve efficiency by 20% under edge-compute constraints.

Projects & Awards

Local AI Workflow Platform

Presented | AgentCamp 2026, Brisbane Edition

Stack: Python, LangGraph, FastAPI, React Flow, Pydantic, YAML

Local-first platform for authoring, running and visualising AI workflows from declarative YAML. Each workflow is validated through a Pydantic GraphSpec contract before being compiled into runnable graphs, with approval interrupts, rollback restore and eval coverage.

Capture the Narrative

1st Place | UNSW National AI Competition

Stack: LLMs, multi-agent simulation, AWS EC2, S3

Built generative-AI agents inside a simulated election environment as an adversarial exercise in how synthetic content shifts sentiment.

SafeMind

Most Viable | TANDA GenAI Hackathon

Stack: Python, Flask, OpenAI API, MongoDB, python-docx

Voice-driven workplace incident capture that pre-fills WorkCover claim forms, compressing hours of paperwork for injured workers.

Education

Master of Artificial Intelligence

2025 – 2026

Queensland University of Technology | GPA 6.54/7.0

Bachelor of Information Technology

2018 – 2021

University of Science and Technology of Hanoi

Volunteer

Vice President

Oct 2025 – Present

QUT The Emerging Coders Hub (TECH)

Ran coding and IT workshops teaching beginners to build chatbots, personal websites and AI agents, and organised career events including mock interview sessions, progressing from General Executive (Jun–Oct 2025).

Project Manager

Sep 2025 – Present

QUT AI & ML Society

Led 30+ members building a predictive analytics dashboard on real insurance data for claim-delay prediction and anomaly detection, stepping up from Project Officer (Aug–Sep 2025).
